State Announces \$1.4 Million in Grants for Wisconsin's Coastal Communities

The Department of Administration (DOA) announces that it is awarding \$1.4 million in grants for 34 coastal projects across Wisconsin. These grants will be used to protect and improve the natural resources, support the quality of life and foster economic development in those areas.

"When you think of Wisconsin, you think of the beautiful land and lakes across our state. These grants help protect or restore our valuable water and coastal resources so that families and Wisconsinites can enjoy them for generations to come," said DOA Secretary Mike Huebsch.

DOA's Wisconsin Coastal Management Program works with state, local and tribal government agencies, along with non-profit organizations to manage the assets and conservation efforts of the Great Lakes and their coastal areas. The grants were awarded to state and local governments, regional planning commissions, universities or nonprofit organizations in the following categories:

- Natural hazards: prevent or mitigate damage caused by natural hazards, such as flooding, coastal erosion or damage done to wetlands.
- **Wetland Protection/Habitat Restoration**: acquire, restore, manage or enhance coastal wetlands or other coastal habitat
- **Nonpoint Source Pollution**: address water quality problems in surface and ground-water resources resulting from runoff pollution
- **Coastal Resources and Community Planning**: encourage local governments to develop plans that balance coastal resource protection and economic development
- Great Lakes Education: programs and materials that enhance coastal education and encourage stewardship of coastal resources
- Public Access: improve public access to the state's beaches and waterways
- Technical Assistance: technical assistance, training of citizens and local officials

A complete list of grants is listed below:
